README

The submission consists of three files namely the Report,Source Code and the Design File

The report file consists of Abstract,Architecture and References with respect to the project.

The Source Code consists of implementation algorithms and details with respect to the project.

The Design file consists of block diagrams with respect to the design of the h2 database since it has been designed to be operated in three different modes.

We have collectively implemented the features in Aggregate.java file ,AggregateDataDefault.java and Function.java with respect to the aggregate functions and minimalistic string functions.
